

Lutronic's AccuLift Procedure Featured on The Doctors Show; Minimally Invasive Facelift Performed in Minutes With Medical Laser

Physicians and patients, who are looking for a minimally invasive “lifting” solution to improve the shape of their lower face, will not want to miss Lutronic's AccuLift™ procedure featured this week on The Doctors Show. Facial and Cosmetic Plastic Surgeons, J. David Holcomb, M.D., and Stewart Wang, M.D., introduced the minimally invasive laser facelift and contouring treatment to the show's large viewing audience, using Lutronic's AccuSculpt™ medical laser to perform the procedure in less than 30 minutes.

San Jose, CA ([PRWEB](#)) November 17, 2011 -- Physicians and patients, who are looking for a minimally invasive “lifting” solution to improve the shape of their lower face, will not want to miss Lutronic's AccuLift™ procedure featured this week on The Doctors Show. Facial and Cosmetic Plastic Surgeons, J. David Holcomb, M.D., and Stewart Wang, M.D., introduced the minimally invasive laser facelift and contouring treatment to the show's large viewing audience.

The AccuLift procedure works by sculpting the skin of the face and neck, changing the “pear” shape typical of aging adults to the “apple” shape typical of youth. It gently and precisely removes excess fatty tissue that has accumulated and shifted downward in the face and neck in just 30 minutes.

Dr. Holcomb, co-developer with Lutronic of the AccuLift procedure (also known as Laser Assisted Facial Contouring), explained, “the minimally invasive AccuLift procedure can deliver the type of re-definition and contouring of patients' features that until now would have required a more invasive surgical approach. It is an excellent choice to bridge the gap between facial fillers and surgical facelifts.”

The show featured a live AccuLift procedure of the lower face with a dramatic result at the end of the segment. Also impressive were before-and-after images of a patient that continues to hold her improvement more than 2 years following her AccuLift procedure of the lower face and the area under the chin.

“Within 30 minutes, we are able to reverse signs of aging without incisions or significant recovery period,” said Dr. Wang. He continued, “This is truly a remarkable advancement in the field of facial rejuvenation.”
